<p>Product-Specific Risks</p>	
<p>• You are exposed to Vietnam market risk.</p> <ul style="list-style-type: none"> ○ All financial markets may at times be adversely affected by changes in political, economic and social conditions. The Sub-Fund's investments are subject to the risks inherent in all securities i.e. the value of holdings may fall as well as rise. Since emerging markets (including Vietnam) tend to be more volatile than development markets, any holdings in emerging markets are exposed to higher levels of market risks. ○ In addition, investments in Vietnam are also currently exposed to risks pertaining to the Vietnamese market. These include risks brought about by current investment ceiling limits where foreign investors are subject to certain holding limits, which are determined for each industry based on Vietnam's international commitments, specific laws and market access conditions for foreign investors; and constraints currently imposed on the trading of listed securities where a registered foreign investor may open multiple securities trading accounts in accordance with the principle that such an investor opens only one trading account at each licensed securities company in Vietnam, except for the cases as provided in Vietnamese laws. These may contribute to the illiquidity of the Vietnamese securities market, create inflexibility and uncertainty on the trading environment. <p>• You are exposed to tracking error risk.</p> <ul style="list-style-type: none"> ○ Tracking error occurs when funds are unable to track exactly the performance of their underlying indices. <p>• You are exposed to concentration risk.</p> <ul style="list-style-type: none"> ○ The Sub-Fund is highly concentrated and focused on a single country (i.e. Vietnam). Investors should be aware that the Sub-Fund is likely to be more volatile than a broad-based fund, such as a global equity fund, as it is more susceptible to fluctuations in value resulting from adverse conditions in of the Vietnamese economy, where all the Index Securities companies are based and conduct their business operations. The Sub-Fund's Net Asset Value may have higher volatility as a result of its narrower investment focus on a limited geographical market, when compared to funds investing in global or wider regional markets. The Sub-Fund will be exposed to the various industries and sectors of the Index Securities and unfavourable market, economic and/or political developments which affect such industries and sectors will affect the value of the Index Securities companies and also the value of the Sub-Fund. <p>• You are exposed to foreign exchange risk.</p> <ul style="list-style-type: none"> ○ The Vietnamese Dong ("VND") is a controlled currency, with an official US\$/VND reference inter-bank exchange rate set by the State Bank of Vietnam on a daily basis and banks are allowed to raise their daily trading band for the US\$/VND exchange rate to $\pm 5\%$ against such inter-bank rate. Investors should note the risks of limited liquidity in the 	

Vietnam foreign exchange market.

• **You are exposed to regulatory risks.**

- Foreign investment in Vietnam's primary and secondary securities markets is still relatively new and many of Vietnam's existing securities laws are ambiguous and/or have been developed to regulate direct investment by foreigners rather than portfolio investment. Investors should note that because of a lack of precedent, securities market laws and the regulatory environment for primary and secondary market investments by foreign investors are in the early stages of development, and remain untested.
